

Endpoint Plan

1.) Authentication Endpoints

HTTP Method	Route	Description	Role	Request Body	Expected Response
POST	/api/auth/register	Register a new user	Public	Name, email, password, role	201 Created
POST	/api/auth/login	Authenticate user	Public	Email, password	200 OK + token

Registration allows either an organiser or participant to create an account and the login verifies the user's credentials and returns an authentication token, normally a JWT, then the token can then be used to protect endpoints.

2.) Profile Endpoints

HTTP Method	Route	Description	Role	Request Body	Expected Response
GET	/api/profile	View logged-in user's profile	Organiser/ Participant	None	200 OK
PUT	/api/profile	Update own profile	Organiser/ Participant	Updated profile	200 OK

The requirement specifically says both roles must be able to view and update their own profile information. Therefore, we should not allow a participant to update another user's profile. The logged-in user's identity should come from their authentication token.

3.) Event Endpoints

Method	Route	Description	Role	Request Body	Expected Response
GET	/api/events	View all events	Both	None	200 OK
GET	/api/events/{id}	View one event	Both	None	200 OK
POST	/api/events	Create event	Organiser	Event details	201 Created
PUT	/api/events/{id}	Update event	Organiser	Updated event	200 OK
DELETE	/api/events/{id}	Delete event	Organiser	None	204 No Content

The functional requirements state that organisers can: Create, Update and Delete events.

Both organisers and participants can view events.

The event must capture: Name, Description, Date, Location, Distance and Event type.

4.) Category Endpoints

Method	Route	Description	Role	Request Body	Expected Response
GET	/api/events/{eventId}/categories	View categories for event	Both	None	200 OK
POST	/api/events/{eventId}/categories	Create category	Organiser	Category details	201 Created
PUT	/api/categories/{id}	Update category	Organiser	Updated category	200 OK
DELETE	/api/categories/{id}	Delete category	Organiser	None	204 No Content

Categories belong to a particular event.

For example: Event: Johannesburg 21km

Categories:

- Under 20
- Senior
- 21km

Only the organiser should create, update or delete categories and both roles can view them.

5.) Enrollment Endpoints

Method	Route	Description	Role	Request Body	Expected Response
POST	/api/enrollments	Enter an event	Participant	EventID, CategoryID	201 Created
GET	/api/enrollments/my	View own enrolments	Participant	None	200 OK
GET	/api/events/{eventId}/enrollments	View enrolments for event	Organiser	None	200 OK

Method	Route	Description	Role	Request Body	Expected Response
GET	/api/enrollments/{id}	View enrolment	Participant/ Organiser	None	200 OK

6.) Results Endpoints

Method	Route	Description	Role	Request Body	Expected Response
POST	/api/enrollments/{enrollmentId}/result	Record participant result	Organiser	FinishTime, Position	201 Created
PUT	/api/results/{id}	Update result	Organiser	FinishTime, Position	200 OK
GET	/api/results/my	View own results	Participant	None	200 OK
GET	/api/events/{eventId}/results	View event results	Organiser	None	200 OK
GET	/api/results/{id}	View a result	Participant/ Organiser	None	200 OK

This is the complete API endpoint list.

#	Method	Route	Role
1	POST	/api/auth/register	Public
2	POST	/api/auth/login	Public
3	GET	/api/profile	Both
4	PUT	/api/profile	Both
5	GET	/api/events	Both
6	GET	/api/events/{id}	Both
7	POST	/api/events	Organiser
8	PUT	/api/events/{id}	Organiser
9	DELETE	/api/events/{id}	Organiser
10	GET	/api/events/{eventId}/categories	Both
11	POST	/api/events/{eventId}/categories	Organiser
12	PUT	/api/categories/{id}	Organiser
13	DELETE	/api/categories/{id}	Organiser

#	Method	Route	Role
14	POST	/api/enrollments	Participant
15	GET	/api/enrollments/my	Participant
16	GET	/api/events/{eventId}/enrollments	Organiser
17	GET	/api/enrollments/{id}	Both
18	POST	/api/enrollments/{enrollmentId}/result	Organiser
19	PUT	/api/results/{id}	Organiser
20	GET	/api/results/my	Participant
21	GET	/api/events/{eventId}/results	Organiser
22	GET	/api/results/{id}	Both
